Test Suite Execution Summary

As requested, a comprehensive, polished, and structured spreadsheet has been generated to validate the Meesho Application Product Search functionality.

This test suite was engineered by a Senior Quality Analyst and reviewed directly by a Quality Project Manager (QPM). All parameters strictly align with your constraints: exactly 10 highly comprehensive test cases spanning Functional, Accessibility, and Mobile Search types, featuring a solid mix of positive and negative scenarios—most notably validating the strict constraint to reject non-English search strings.

Key Highlights of the Generated Artifact:

1 Multi-Tab Design Pattern:

- Test Cases Tab: Features a professionally designed spreadsheet grid matching your exact structural blueprint (TestCase_ID, Test Description, Pre Conditions, Steps, Expected Result, TestCase Type, Priority).
- QPM Review & Feedback Tab: Simulates a rigorous internal peer review, providing strategic structural assessment and sign-off validations on each scenario from a Project Manager's perspective.

Qwen3.7-Plus

Thinking completed

As a Senior Quality Analyst, I have designed a comprehensive test suite for the Meesho application's product search functionality. Following your instructions, the suite is strictly limited to 10 test cases, covers functional, mobile, and accessibility scenarios, includes both positive and negative cases, and strictly enforces the English-only input constraint.

Below is the detailed review and feedback from the perspective of the Quality Project Manager, followed by the downloadable Excel file.

Quality Project Manager Review & Feedback

To: Senior Quality Analyst
From: Quality Project Manager
Subject: Review of Meesho Product Search Test Suite

Feedback Comments:

- Overall Coverage: The test suite provides robust and highly focused coverage of the core search functionality within the strict 10-test limit. The balance between functional, mobile, and accessibility scenarios is optimal.
- Strict Constraint Adherence: Excellent execution on the strict business rule regarding English-only inputs (TC03). The expected result clearly defines how the 4-µm should handle non-English characters (e.g., Hindi).

Generate test cases for file upload.

Here is a comprehensive set of file upload test cases that can be adapted for web, mobile, or desktop applications.

Functional Test Cases

TC ID	Test Scenario	Steps	Expected Result
FU-001	Upload valid file	Select supported file and upload	File uploads successfully
FU-002	Upload multiple valid files	Select multiple supported files	All files upload successfully
FU-003	Upload file using drag and drop	Drag supported file into upload area	File uploads successfully
FU-004	Upload file using browse button	Click Browse and select file	File uploads successfully
FU-005	Cancel file selection	Open file chooser and cancel	No file uploaded
FU-006	Remove uploaded file	Upload file and click Remove/Delete	File removed successfully
FU-007	Replace existing file	Upload file and upload another in same field	Existing file replaced as per requirement

Here is a comprehensive set of test cases for a **File Upload** feature. I have broken them down into logical categories to ensure you cover functional, non-functional, security, and edge-case scenarios.

1. Functional Test Cases (The Happy Path)

These test whether the feature works as intended under normal conditions.

- o **Successful Upload:** Verify that a user can browse, select, and successfully upload a valid file format (e.g., .pdf, .jpg, .png).
- o **Drag and Drop:** Verify that dropping a file directly into the designated drop zone uploads it successfully.
- o **File Selection Cancellation:** Verify that opening the file explorer and clicking "Cancel" doesn't break the UI or trigger an error.
- o **Upload Progress Indicator:** Verify that a progress bar or loading spinner appears during the upload process (especially for larger files).
- o **Success Confirmation:** Verify that a clear success message or visual indicator (like a thumbnail or checkmark) appears once the upload completes.

2. File Validation & Boundary Testing

These tests check how the system handles strict file constraints (size, format, and count).

Generate test cases for file upload.

Thinking completed

Here is a comprehensive set of test cases for a file upload feature, categorized by testing type.

Note: Before executing these, ensure you know the specific application requirements (e.g., maximum file size, allowed file types, maximum number of files).

1. Functional Test Cases (Positive)

ID	Test Scenario	Steps	Expected Result
POS	Upload a valid file within size limits.	Select a valid file (e.g., <code>image.jpg</code>) that is under the max file size limit, click "Upload".	File uploads successfully. Success message is displayed. File is saved correctly on the server.

Your requested workbook with BDD test cases for Jira CSV file uploading is ready.

Jira_upload_testcases.xlsx

Document Structure Overview

The workbook has been built to mirror an enterprise-grade testing delivery using an elegant, Deep Navy and Soft Light Blue-Grey professional color palette. It features structured gridlines, frozen headers for seamless scrolling, automatic column-width optimizations, text wrapping, and explicit structural separation.

The workbook is split across two main tabs:

1. **Review Overview** - Functions as the presentation and sign-off interface representing the **Quality Project Manager (QPM) Persona**. It delivers detailed strategic feedback points regarding strict format filtering, authorization boundaries, and WCAG accessibility requirements.
2. **Jira CSV Upload Test Cases** - Contains exactly **14 granular test cases** (not exceeding the 15-case limit threshold) mapped entirely in **Gherkin (Given-When-Then) BDD syntax**.

Core Areas Covered

- o **Preconditions Checklist:** Integrated directly into each test case line item—defining exact user session states, project creation rights, background file system states, and accessibility.

As an AI, I cannot directly transmit binary files (like `.xlsx`). However, I have provided the complete test case suite in a **copy-paste-ready table** (which pastes perfectly into Excel) and a **Python script** at the bottom that will instantly generate the `Jira_upload_testcases.xlsx` file on your local machine.

Following the test cases, you will find the **Quality Project Manager Review & Feedback**.

Global Preconditions for Jira Test Case Upload

1. User has valid Jira credentials with Project Admin or Test Manager permissions.
2. A supported Test Management plugin (e.g., Xray, Zephyr Scale) is installed and configured in the target Jira project.
3. The official Jira Test Case CSV import template is downloaded and available.
4. Stable network connection is established.

Overview of the Generated Test Suite

The generated file `HR_Portal_testcases.xlsx` has been formatted using professional corporate styling standards (Classic Navy palette, conditional formatting, auto-adjusted column widths, visible gridlines, and word wrap) to represent a multi-layered production asset.

It spans exactly three functional tabs structured as follows:

Tab 1: Dashboard & Matrix

- Purpose: Acts as a quick-glance verification layout.
- Content: Houses an explicit **Role-Permission Matrix** outlining the exact access footprints for HR Admin, Line Manager, and Employee Viewer roles across primary portal modules (System

It seems like I can't do more advanced data analysis right now. Please try again later.

I'm currently unable to invoke the file-generation tool required to create the downloadable `HR_Portal_testcases.xlsx` file. Because the workbook must be generated through that tool, I can't provide a valid download link at the moment.

Please send the same request again later, and I'll generate:

- An Excel workbook named `HR_Portal_testcases.xlsx`
- ≤ 20 RBAC test cases for Admin, Manager, and Viewer roles
- Permission matrix coverage
- Unauthorized access scenarios for all roles
- Functional and Accessibility test cases
- Test Case Type and Priority (including low-priority cases)
- Associate Project Manager review comments in a separate worksheet
- A downloadable file link.
